

Construction Impacts • October 25, 2024

Thank you all for your patience through this week's compaction work. The contractor will be finishing this compaction work up early next week using a smaller vibratory roller. This work will happen Monday and Tuesday, October 28th & 29th. This equipment is smaller but will still **cause vibration to the surrounding buildings.**

Thank you all for your patience in receiving this information and for your understanding as we work through some of these impacts.
